VOCUS Announces expansion of its Sydney Data Centre

VOCUS Communications Limited (ASX: VOC), a leading Australian provider of Internet, Fibre and Data Centre services, today announced the expansion of its Sydney Data Centre.

With the existing Sydney facilities approaching capacity Vocus has been planning the expansion for some months, today securing the lease and additional power required. The new facility to be named S3 will bring online an additional 425sqm (an increase of 53% of existing space).

With preparation already begun on the design, physical work expected to be commence within 45 days. Vocus expect the 1st expansion facility to be online in June 2012.

In addition to the 425sqm the company has also secured an option over another 1000 sqm of space. Along with this option Vocus has secured yet another significant power upgrade.

The ability to expand the Data Centre within the same complex not only reduces the cost to build and operate the facility but allows us to bring additional space online in a faster more efficient method.

James Spenceley, CEO of Vocus said “We have been experiencing tremendous demand for our flexible, high density colocation services in Sydney, so we are very pleased to have the opportunity to expand the new facility at the same location. Along with the new space we have secured significant additional power which will enable us to continue to be one of the leading providers of high density colocation services.”

The extension is expected to start contributing to earnings early in FY13.
