# IaaS made simple and cost effective

Our Infrastructure as a Service (IaaS) offers a robust platform built on industry-leading technologies, connected to one of Australia's largest fibre networks. Migrating to our IaaS solution means you spend less time managing infrastructure and more time on what matters — your business.

We offer Points of Delivery (PoD) in Sydney, Melbourne and Perth, all hosted in our data centres. PoDs are interconnected by Vocus' core network, allowing continuity between your IaaS instances hosted in other PoDs.

You can expand the reach of IaaS by connecting it to your existing Vocus network, and you can connect to the internet through our Firewall as a Service (FWaaS) offering — enabling you to provide external services such as web hosting, while being protected through our DDoS service.

Our standardised yet flexible environment, provides multiple options to connect your IaaS instance — all backed by our highly available, resilient network.

---

## Customer first service

At Vocus, we're crazy about our customers and aim to put you first in all our products. This is why our IaaS has a simple all-inclusive billing model. You pay for allocation of resources (CPU, memory, storage), backup, and even software licencing upfront, enabling you to control the costs and reducing bill shock. We'll even help you right-size your virtual machines before migrating, helping reduce the cost of allocated resources.

So that you have the best private cloud experience possible, we don't oversubscribe resources, allowing your team to quickly deploy new services using the tools they already know and love.

Your data is important, and we want to make sure it's backed up safely. That's why we've designed backup policies for our private cloud to suit every business's needs, ranging from one month to seven years' retention. Our backup service allows you to instantly restore an entire virtual machine or file, so your data is always accessible.

---

# Who is IaaS for?

Vocus offers IaaS for all business sizes, backed by our carrier-grade, high-performance fibre network.

- Small 10 –100 Staff
- Medium 100 – 500 Staff
- Large 500+ Staff

---

## Multiple locations

- IaaS hosting in Sydney, Melbourne, and Perth
- With our Australia-wide fibre network, we can bring your whole network together

---

## Well-known technologies

- We use industry-leading technologies, giving you confidence in our platform
- No downtime for training—your team already knows how to use it

---

## Support you can count on

- Deal directly with the support teams and staff who run the platforms you use 24/7

---

## All-inclusive billing

- Monthly allocation billing means no bill surprises
- Pay for the CPU (per vCPU), memory (per GB), and storage (per GB) you sign up for
- Simple backup pricing per VM + GB backed up
- Software licencing options available

---

## Single pane of glass

- We aim to have a single pane to manage your IaaS so that you don't have to jump around

---

# Product specifications

Parameter	Value
Points of Delivery (PoD)	Sydney, Melbourne and Perth
Resource pools per PoD	Only pay for the resources you need: <ul style="list-style-type: none"><li>· vCPU (in single increments)</li><li>· Memory (per GB)</li><li>· Storage (per GB)</li></ul>
Management	vCloud Director allows you to centrally manage your resource pool
Backup Services	<ul style="list-style-type: none"><li>· Policy 1 (7 Daily, 5 Weekly, 3 Monthly)</li><li>· Policy 2 (31 Daily)</li><li>· Policy 3 (62 Daily)</li><li>· Policy 4 (31 Daily, 3 Monthly)</li><li>· Policy 5 (31 Daily, 6 Monthly)</li><li>· Policy 6 (31 Daily, 12 Monthly)</li><li>· Policy 7 (31 Daily, 84 Monthly)</li></ul>
Network Traffic	No additional charges for data ingress or egress
Service Desk	Available 24 x 7 x 365
