
Managed SD-WAN

Improve network agility and
user experiences with our
software-defined platform

vocus.com.au

VOCUS

Our solution for you

Your network is the heart of your business. It needs to support an increasingly distributed workforce across a growing variety of end-user devices and enable cloud-first strategies. Your network needs to deliver seamless user experiences, with business-grade security.

Vocus Managed SD-WAN delivers an intelligent, virtualised network overlay, with leading security capabilities at the edge. It provides your business with greater visibility, improved network performance, and better control of the applications traversing on your network. It enables businesses to transition to the cloud at their own pace.

Our solution is powered via Vocus Agile Edge devices, installed at each of your sites. The Agile Edge device is compatible with the complete range of Vocus connectivity solutions and operates seamlessly over third-party MPLS and internet services. We provide a dedicated portal, giving you real-time analytics and insights into your network's performance.

As a managed service, we design and implement your solution, provide 24x7 support, and offer ongoing service monitoring and hardware management. Redefine the boundaries of your network and improve user experiences and productivity with our Managed SD-WAN.

Vocus Managed SD-WAN key features

Application-aware routing

Multi-path

Vocus managed

Next-generation firewall

24x7 support

Dedicated portal

Features and Benefits

Managed SD-WAN is suited to organisations wanting to improve network performance and security across multiple locations.

Improve user experiences

- Prioritise traffic and bandwidth efficiently through centralised routing policies so that staff can access business-critical applications quickly and seamlessly.
- Route traffic according to business priority, ensuring data travels along the ideal path to its destination, keeping the private network clear for business-critical services and applications while sending less critical traffic over public networks.

Boost security

- Integrated next-generation firewall provides comprehensive threat protection to protect your business at the network edge so staff can securely access systems and applications.
- Next-generation firewall with features including anti-botnet, anti-virus, web filtering, IP reputation, intrusion prevention, SSL inspection, and IPsec VPN inspection.
- Continuous threat intelligence updates to provide your business with protection from the latest risks and vulnerabilities.

Better resiliency

- Keep your business running with a flexible hybrid network. Our solution is transport-agnostic, allowing traffic to be securely distributed over a private network, internet, or 4G connections.
- Traffic can be instantly routed to the next best available link in the event of an outage or link degradation (requires suitable SD-WAN policies).
- Advanced service level agreements (SLAs) and 24x7 support from our account management and assurance teams.

Simplify management

- A complete, integrated SD-WAN and network security solution that simplifies site deployments and offers a cohesive service management experience.
- We design and implement your solution and provide on-going management and monitoring of your network, devices, and policies across sites, freeing up valuable IT resources.
- Dedicated portal providing real time analytics and insights into user activity and applications running on your network.

Add-ons

Vocus provides a range of add-on services to help you get the most out of your solution. We offer additional security and redundancy options to help safeguard your network.

Add-On Services

High Availability

- Delivers a second Agile Edge device at your critical sites for added resiliency and improving service uptime.

Two-factor Authentication

- Add additional security and verify users attempting to access your organisation's systems and applications with a secondary layer of authentication.

4G Access

- We offer 4G wireless access to improve site and network resiliency and to deliver temporary connectivity*. 4G services can be provided either as a Vocus managed service, or with a compatible 'BYO' SIM.

Please contact Vocus for the complete range of value-added services offered with your Managed SD-WAN solution.

* Subject to Vocus agreement.
